Product features			
Application	accordance with the damper n a damper shaft from 3/8" up to centered at delivery. For shafts mounting brackets are availab the damper shaft. The actuato	ol of dampers in HVAC systems. Actuator sizing should be done in anufacturer's specifications. The actuator is mounted directly to o 1/2" in diameter by means of its universal clamp, 1/2" shaft to up to 3/4" use K6-1 accessory. A crank arm and several le for applications where the actuator cannot be direct coupled to o operates in response to a 210 V, or with the addition of a 500Ω but from an electronic controller or positioner. A 210 V feedback indication.	
Operation	positive close-off on air tight d the damper with, and without, rotation and is provided with a uses a brushless DC motor wh (ASIC) and a microprocessor. T provide a constant rotation rat monitors and controls the brus function to prevent damage to	e true spring return operation for reliable fail-safe application and ampers. The spring return system provides consistent torque to power applied to the actuator. The LF series provides 95° of graduated position indicator showing 0 to 95°. The LF24-SR US ch is controlled by an Application Specific Integrated Circuit he microprocessor provides the intelligence to the ASIC to e and to know the actuator's exact fail-safe position. The ASIC shless DC motor's rotation and provides a digital rotation sensing the actuator in a stall condition. The actuator may be stalled n without the need of mechanical end switches. Power ding mode.	
Typical specification	and linkage and be capable of $1/2$ " shaft (default). Actuator simust provide modulating dam $500\Omega$ resistor, a 4 to 20 mA corbrushless DC motor controlled angles of rotation. Run time sh signal shall be provided for pobe used for either clockwise or listed, have a 5 year warranty,	actuators shall be direct coupled type which require no crank arm direct mounting to a shaft up to a 3/4" diameter and center on a nall deliver a minimum output torque of 35 in-lbs. The actuator per control in response to a 2 to 10 VDC or, with the addition of a ntrol input from an electronic controller. Actuators shall use a by a microprocessor and be protected from overload at all all be constant, and independent of torque. A 2 to 10 feedback sition feedback. The actuator must be designed so that they may counter clockwise failsafe operation. Actuators shall be cULus and be manufactured under ISO 9001 International Quality hall be as manufactured by Belimo.

## **Electrical installation**

## Marning! Live electrical components!

During installation, testing, servicing and troubleshooting of this product, it may be necessary to work with live electrical components. Have a qualified licensed electrician or other individual who has been properly trained in handling live electrical components perform these tasks. Failure to follow all electrical safety precautions when exposed to live electrical components could result in death or serious injury.

Meets cULus requirements without the need of an electrical ground connection.

A Provide overload protection and disconnect as required.

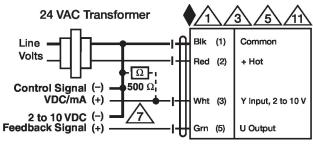

Actuators may also be powered by DC 24 V.

- 🚯 Only connect common to negative (-) leg of control circuits.
- A 500 Ω resistor (ZG-R01) converts the 4...20 mA control signal to 2...10 V.

Actuators may be connected in parallel if not mechanically linked. Power consumption and input impedance must be observed.
