Belimo Duct Sensor Assistant App
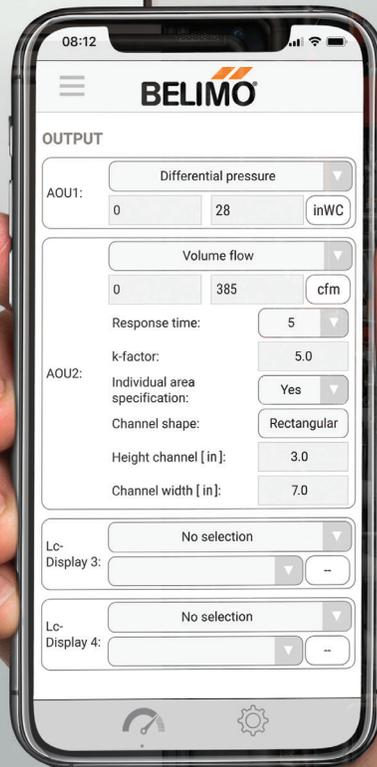

Superior Application Data Access

With a smartphone and the Belimo Bluetooth® dongle (A-22G-A05), the duct sensor assistant app provides easy programming, commissioning, and troubleshooting of specific Belimo duct and outdoor sensors.

The App allows the user to view the basic device information, configure the measuring data and display, change the address, set offsets, set maintenance and service dates and more.

Intuitive operation

Duct Sensor Assistant App

Allow for:

– Viewing of basic sensor information.

– Parameterization of the output signals and measuring ranges.

– Changing the LCD display text alignment, brightness, color and measuring units, for sensors with an LCD display.

– Modifying the sensors address, and viewing the sensors BUS-settings.

– Creating offsets based on elevation and measured value.

– Scheduling future servicing dates and viewing past dates.

– Contacting Belimo technical support for their region.

– Saving the configuration to the app and uploading it to other sensors saving time and money.

– Available in six languages.
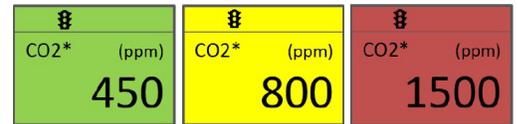

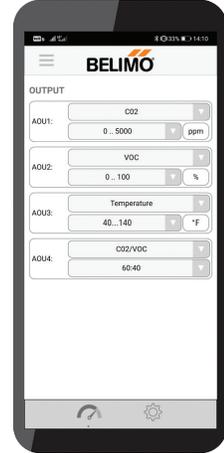

System requirements

An operating system iOS version 9 or higher or Android version 5 or higher is required to use the app. The smartphone must have a Bluetooth 4.x communication module. The Bluetooth USB dongle (A-22G-A05) is required to enable communication between the app and a Belimo sensor.
