Outdoor Light Transmitter

SLO320 is an electronic light transmitter that converts a lux measurement into an electric signal of 4-20 mA or 0-10 V.

It has two sensitivity ranges to suit different light levels: 0-400 lx (e.g. for controlling outdoor lighting), and 0-20 klx (for controlling sunshade systems).

The transmitter is delivered as a complete unit, comprising the sensing element, an amplifier mounted in a housing, which is resistant to ultra-violet light.

The transmitter is intended for wall mounting outdoors.

The sensitivity peak is for light at an angle of incidence of 0° to the perpendicular.

The sensor has the same spectrum sensitivity peak as the human eye.

The transmitter is connected with a 2-wire cable when configured for 4 to 20mA, which serves both as power supply and for signal transmission, and 3-wires for a 0 to 10Vdc output configuration..

Cable: 0.2-1.5 mm²

⚠ Note: Avoid contact with the sensor terminals if the connections wires are live.

ADJUSTMENT

The unit is supplied ready calibrated with a specified range and precision.

No further calibration is required.
